DYLANE TANO

Full Stack JavaScript Developer

✉ dylane@didicode.com　📞 506 655-4409　📍 Calgary, Alberta, Canada　🔗 didicode.com

Profile

Self-taught and passionate fullstack JavaScript developer, based in Canada. I specialize in building clean, responsive and scalable web apps using modern technologies such as React, TypeScript, Node.js and MongoDB. I enjoy crafting intuitive user interfaces, solving backend challenges, and bringing impactful digital ideas to life through real-world projects.

Projects

05/2025 – Present　**Facturier.dev,** *Application de facturation moderne* ⎘
Un SaaS de facturation pour freelances et développeurs. Génération de devis/factures, export PDF, paiements Stripe, interface rapide et intuitive.
Stack: Figma, Next.js, TypeScript, Tailwind CSS, PostgreSQL, Stripe

03/2025 – 06/2025　**Didicode.com,** *Portfolio personnel* ⎘
Mon portfolio professionnel développé à la main, conçu pour présenter mes projets, compétences et expériences de manière claire et esthétique. Design responsive, structuration modulaire, navigation fluide.
Stack: Next.js, TypeScript, Tailwind CSS, Vercel

05/2025 – 05/2025　**Hommage,** *Donation platform* ⎘
A respectful and minimal donation website for a funeral tribute. Includes a live Stripe integration, real-time donor list modal, and smooth UX.
Stack: Figma, React, Tailwind CSS, Stripe API, MongoDB, Express

02/2025 – 05/2025　**BADAM,** *Peer learning platform* ⎘
A full-featured web application connecting trainers and learners. Developed as a team project, where I acted as lead developer in charge of frontend, backend, and design.
Includes session dashboards, media upload, and notification system.
Stack: React, Tailwind CSS, Node.js, Express, MongoDB, Socket.IO

02/2025 – 04/2025　**Didimeet,** *Event Management Platform API* ⎘
Backend for a peer-learning event platform. Features include JWT authentication, session management, user dashboard, and favorite system with filters.
Stack: Node.js, Express, MongoDB, Mongoose

01/2025 – 02/2025　**MyAddressesBook,** *Personal Address Book API* ⎘
A RESTful API for managing a personal address book. Built with a clean layered architecture including controllers, services, and validations.
Stack : Node.js, Express, MongoDB, Mongoose

Professional Experience
